-----------------------------------	---

Chapter 0: Pipeline Fixture

Math

Inline math $\hat{y} = \sigma(w^T x + b)$ in a sentence.

$$\mathcal{L} = -\frac{1}{N} \sum_{i=1}^N [y_i \log \hat{y}_i + (1 - y_i) \log(1 - \hat{y}_i)]$$

Code

```
import numpy as np
def sigmoid(z):
    return 1.0 / (1.0 + np.exp(-z))
print(sigmoid(np.array([0.0, 2.0])))
```

Table

Metric	Formula	Use
Precision	$\frac{TP}{TP + FP}$	Costly false positives

Interview tip: always state assumptions first.

Q: Why sigmoid for logistic regression?

Because it maps log-odds to (0,1)...
